

REGUPOL PLAYFIX INDOOR SAFETY FLOORING

Please make sure to carry out the repair work as follows:

First of all, the damaged areas should be smoothed and any protruding coating removed using sandpaper. These areas should then be vacuumed. Next, apply the single component **REGUPOL adhesive 40-201** to the damaged areas and level it out using a moist spatula. Allow the adhesive to dry for approximately 2 - 3 hours, until it has formed a skin.

Next, the coloured finish is prepared. Mix the A and B components in the ratio indicated of approx. 6:1 (6.14:1) (usage: approx. 0.15 kg / m²) and apply it with a small lamb's wool roller or a brush. Drying time is around 8 hours.

Once mixed together, these components react and must be used very quickly. You should therefore try to mix the precise amount of coloured finish you require. Make sure the opened container is closed again carefully.

More serious damage, in which the fabric mesh has also been torn, must be repaired by **REGUPOL** specialists.

Composition:

- **REGUPOL adhesive 40-201** (3 cartridges of 310 ml each)
- 1 kg **REGUGYM PU Mat Finish "W"**,
A component (0.86 kg), B component (0.14 kg),
A-and B components approx. 6 : 1 (6.14 : 1),
sufficient for approx. 6 m²
